

BDPASS – The Future of Identity, Access & Consent

A Unified Digital Identity,
Consent & Service Access
System for Bangladesh

The Problem Today

Fragmented Identity & Service Access in Bangladesh

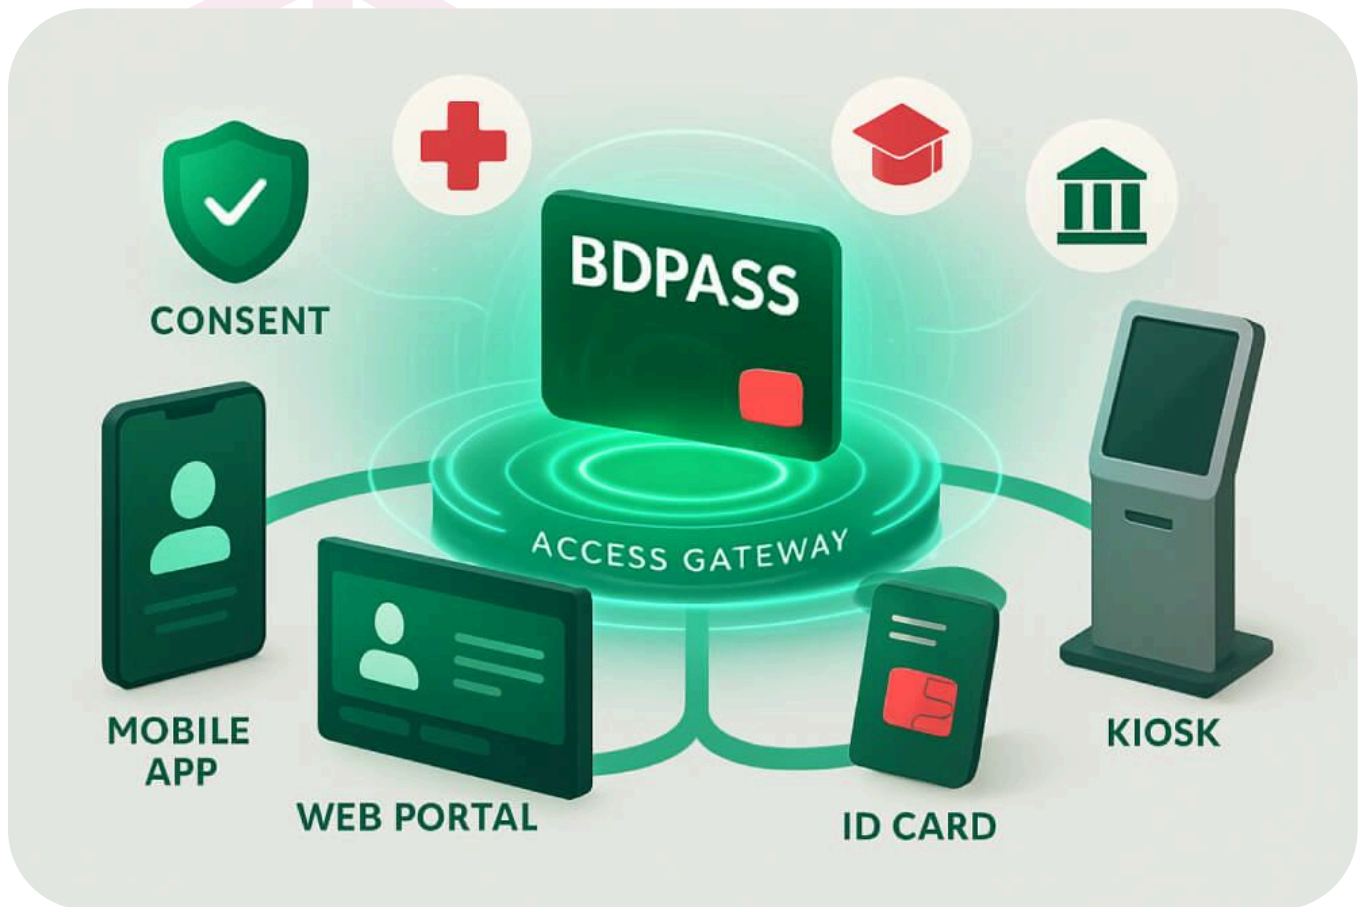

Citizens maintain separate accounts and credentials for each service (NID, Passport, Bank, Telco, etc.)

No unified verification system

Consent-based access doesn't exist

Frequent fraud, data breaches, and repeated paperwork

What is BDPASS?

A Single Digital Identity, Consent Gateway & Access Hub

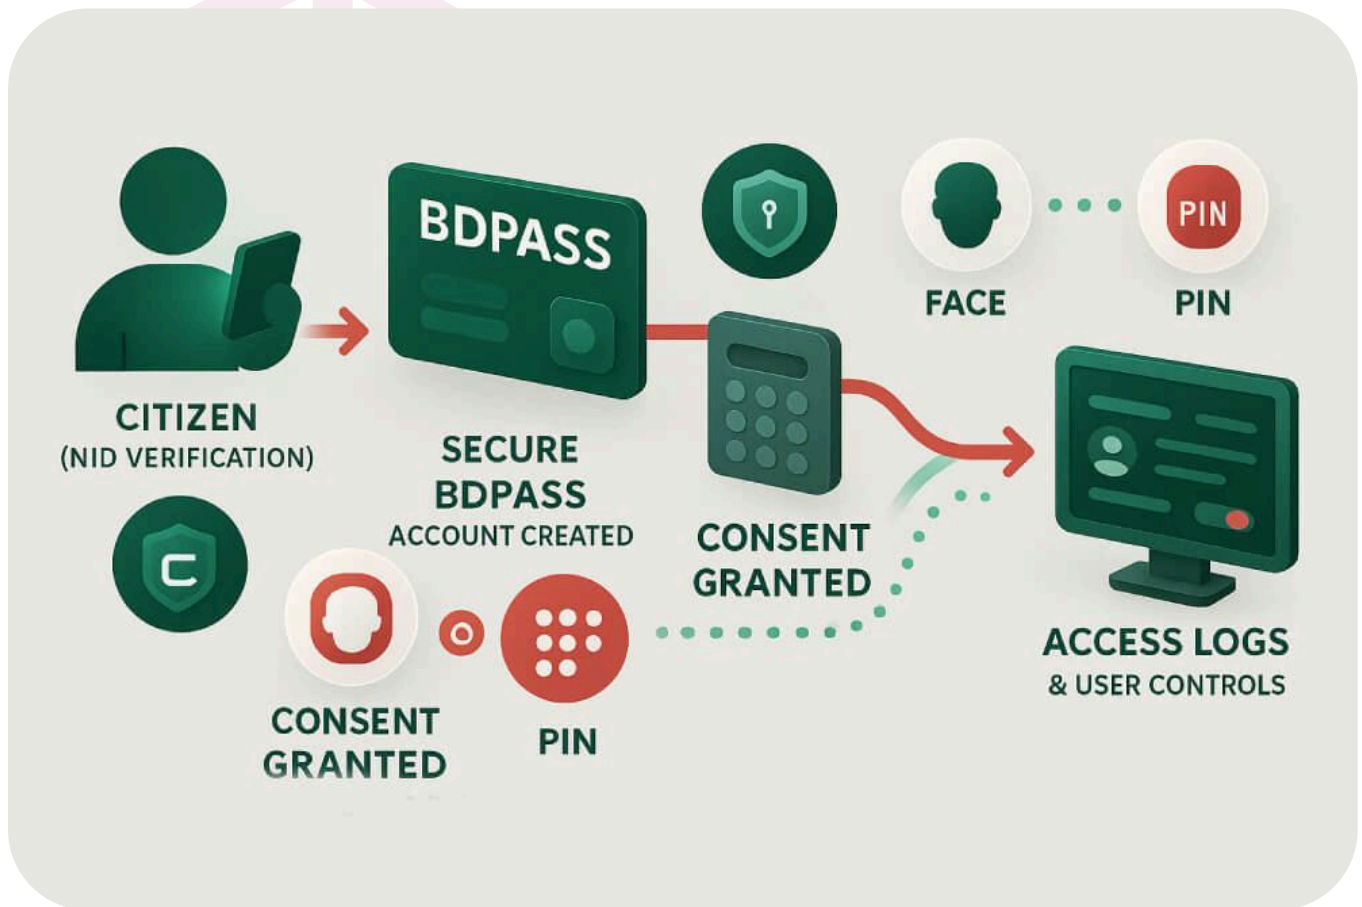

Unified Digital ID for all citizens

Linked with NID, Passport, and other documents

Consent-based access to data by any public or private entity

Works via Mobile App, Web, Card, and Kiosk

How BDPASS Works (Technical Flow)

How the BDPASS System Operates

Citizen Registers → NID Verified (EC API)

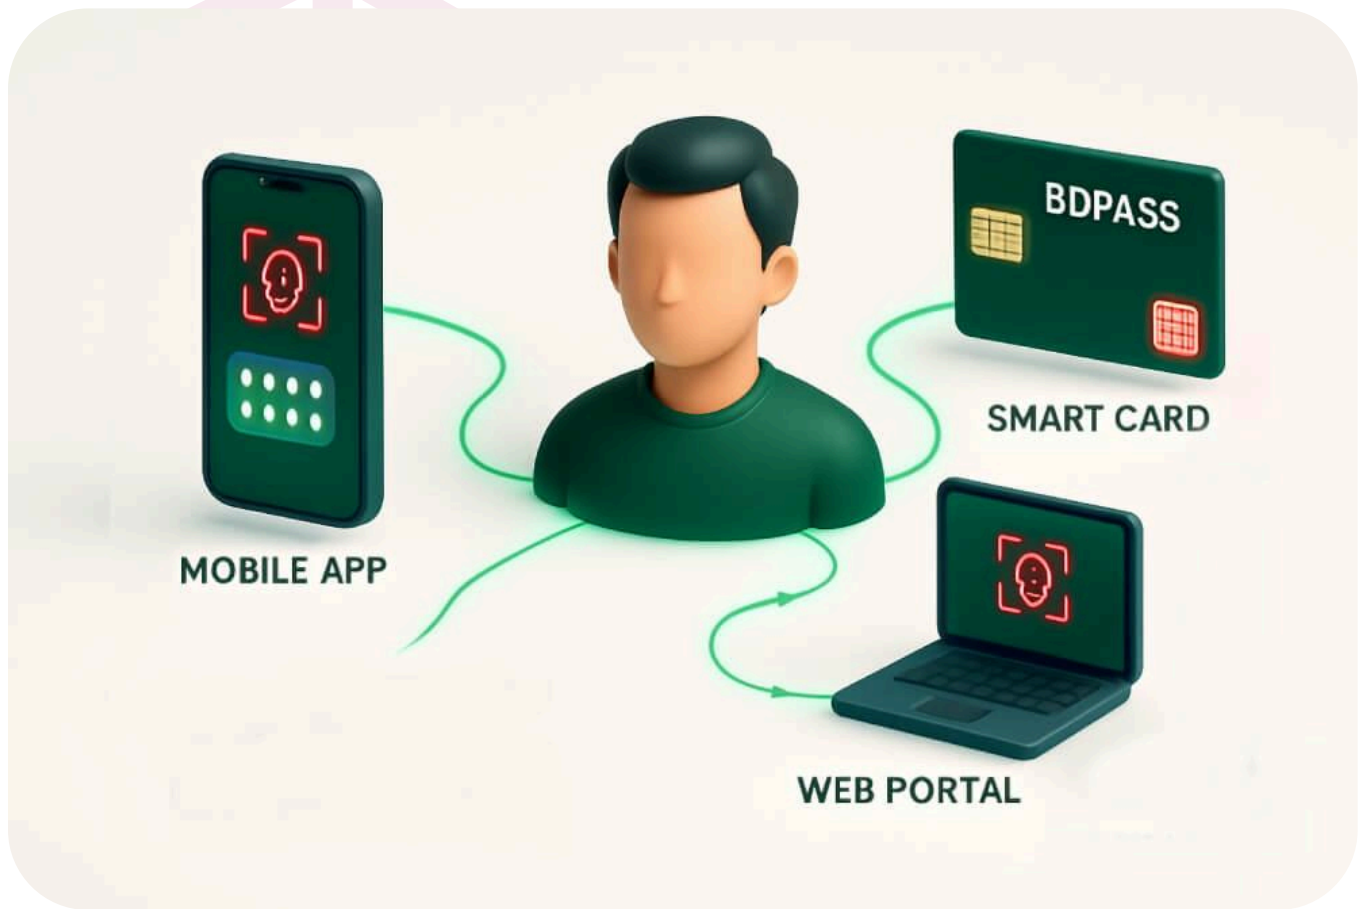

BDPASS Account Created + Secure Vault + PIN

Citizen Controls Consent → Logs into Banks, Telcos, Gov Services

Data Shared with Consent (via OAuth2.0 + Face/Pin)

Citizen sees access logs & controls sharing

Modes of Consent Access

Citizen Can Give Consent Through

BDPASS Mobile App (Face + PIN)

BDPASS Card (with chip & QR)

BDPASS Web Portal (Face + PIN)

Kiosk Machines (Face scan or PIN entry)

Use Cases

Real Examples of BDPASS in Action

Logging into BRAC Bank, NID verified by EC via BDPASS consent

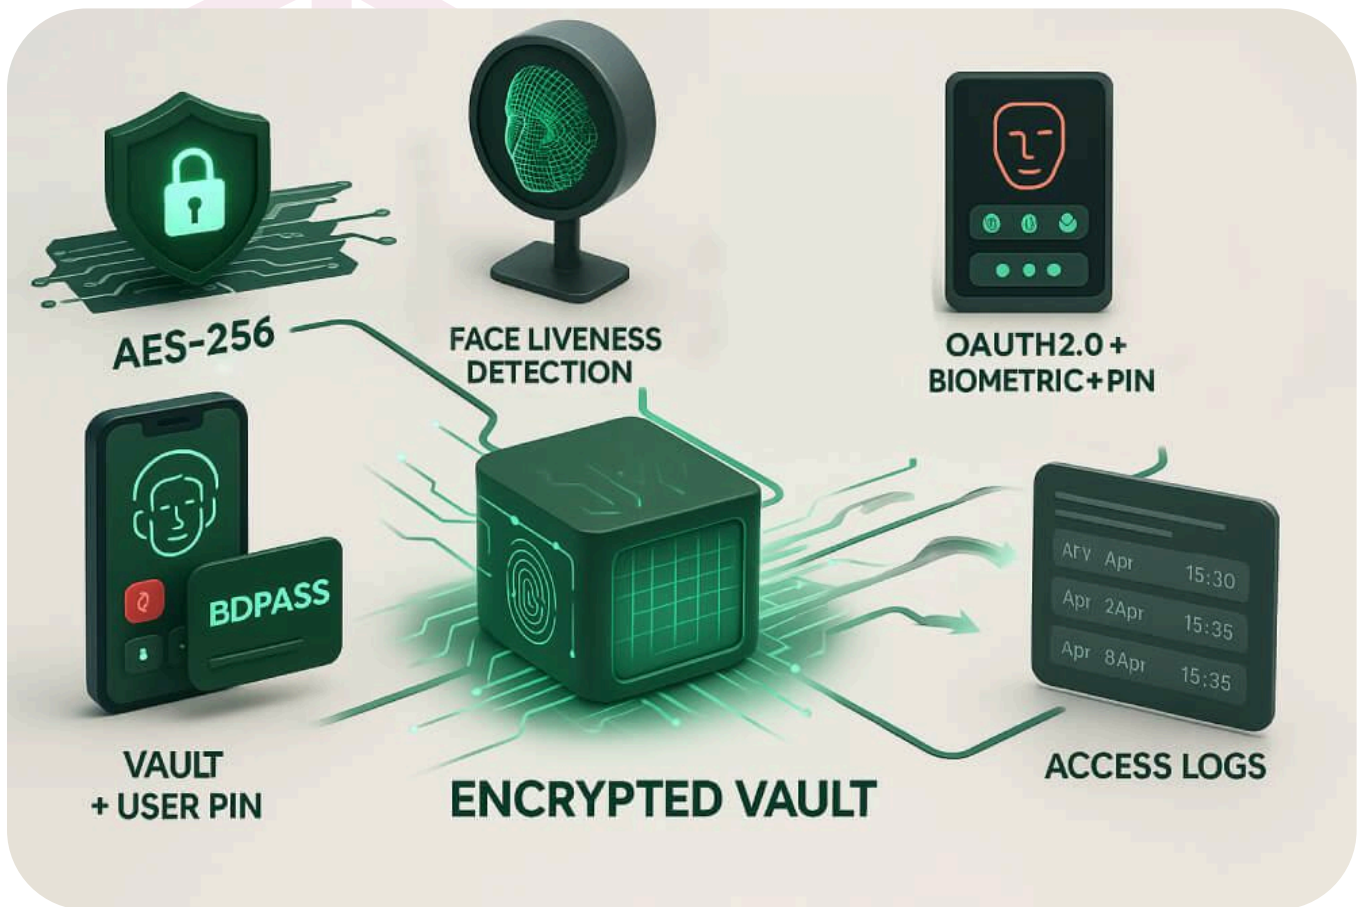

Applying for Land Ownership Transfer → Citizen shares NID, photo, signature from vault

SIM Registration → Consent given via QR or app

Digital Signature for contracts

Applying for a visa or passport online with verified docs

Security Layers

Maximum Security by Design

AES-256 encryption for personal data

Encrypted Vault accessible only with user PIN

OAuth2.0 + Biometric + PIN = Multi-Factor Auth

Face liveness detection for critical services

All access logs shown to user for transparency

EC Role & Benefits

Election Commission as the Backbone of National Identity

EC remains data owner and API controller

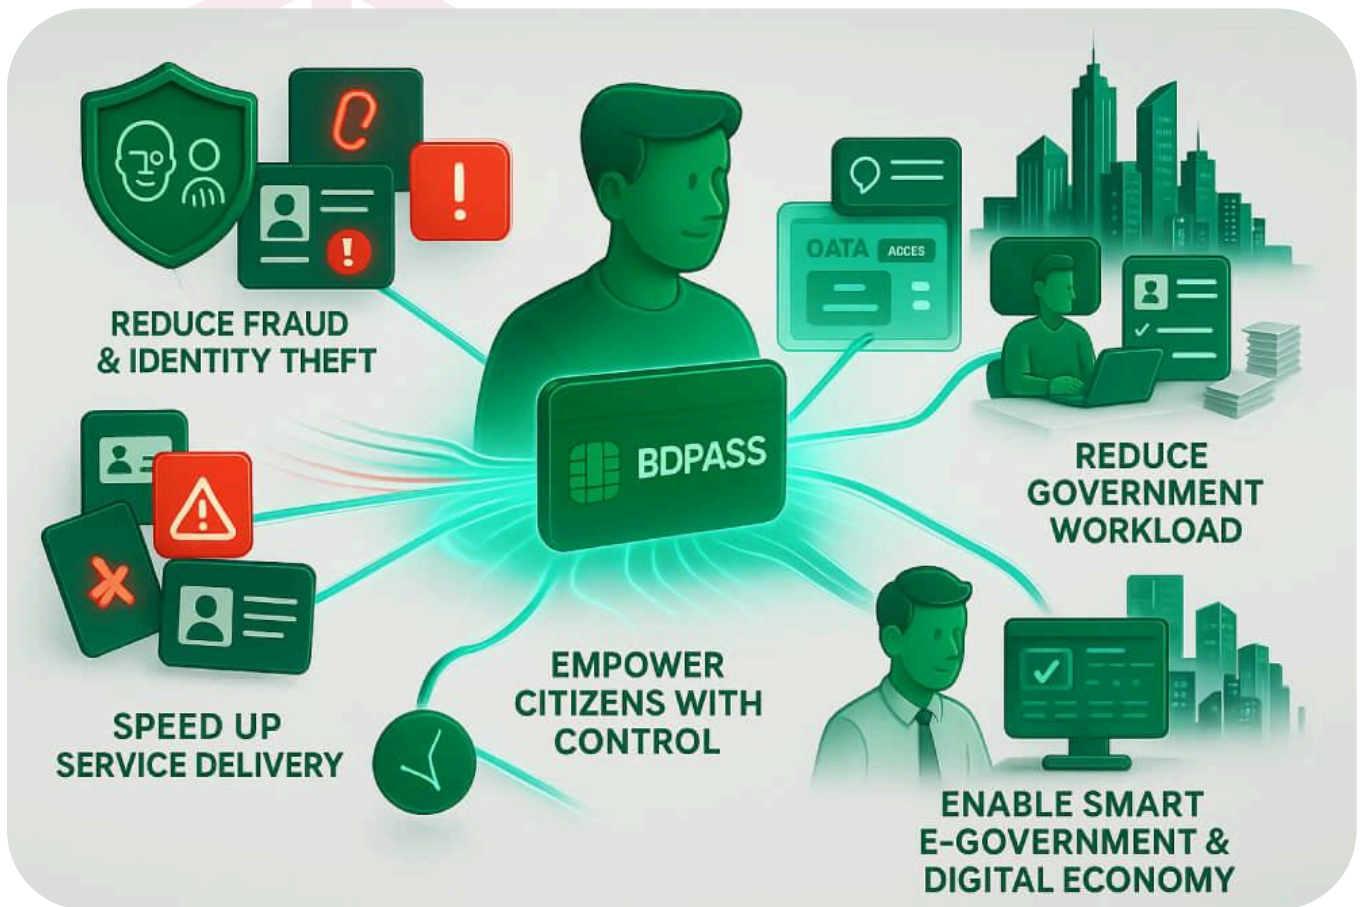

EC charges 5 TK per verification (existing model)

EC becomes trust authority for digital identity

EC can audit BDPASS operations anytime

EC data protected from unauthorized access

National Benefits

Transforming Governance and Citizen Access

Reduce fraud and identity theft

Speed up service delivery

Empower citizens with control

Reduce workload on govt departments

Enable smart e-Government and digital economy

Call to Action

Let's Build a Trusted Digital Identity Infrastructure for All

No law changes required – works under current API access model

Fully citizen-controlled and consent-based

Transparent, secure, and scalable

Backed by EC, audited by ICT/Home Ministry

Let the Citizen Control Access – Let the Nation Go Digital
